Classes to resume Friday at École Forest Grove School

Classes are expected to resume Friday at École Forest Grove School following repairs to a water main break in the neighbourhood.

Repairs to the water main are expected to be completed this evening, after which water service to the school will resume.

As is normal procedure following a water main break, the school is expected to be under a precautionary drinking water advisory. This advisory is put in place to ensure there is no contamination to the water line following the water main break. The advisory is expected to be in place for a few days while water sampling is completed.

The school will follow the guidelines set out by the Saskatoon Health Region. As a precaution, water in the school cannot be consumed. Until the advisory is lifted, parents and caregivers of students are being asked to send a container of tap water from home or commercially bottled water for their child to drink during the school day.
